

AMENDMENT TO THE CLAIMS

1. (CURRENTLY AMENDED) A master scheduling system for use by simulation users and planning users, comprising:
 - a first master plan including actual sales orders and a first user interface configured to receive a simulated sales order from a simulation user and provide an estimated delivery date corresponding to the simulated sales order, the estimated delivery date being calculated based on the actual sales orders, the simulated sales order and other simulated sales orders currently entered in the first master plan; and
 - a second master plan including actual sales orders and a second user interface configured to provide production scheduling and inventory ordering data based on the actual sales orders, the second master plan being intermittently updated to obtain an updated second master plan with new actual sales orders and updated production scheduling data and inventory ordering data based on the actual sales orders and new actual sales orders, and the second master plan being intermittently copied to the first master plan to replace the first master plan so the first and second master plans intermittently contain identical data.
 2. (ORIGINAL) The master scheduling system of claim 1 wherein the second master plan is configured to be updated once per day.
 3. (ORIGINAL) The master scheduling system of claim 2 wherein the second master plan is configured to be copied into the first master plan once per day, after the second master plan is updated.
 4. (ORIGINAL) The master scheduling system of claim 1 wherein the actual sales orders include simulated sales orders that have an assigned probability, of being converted into an actual sales order, above a desired threshold.
 5. (ORIGINAL) The master scheduling system of claim 1 wherein the first user interface is

configured to enter simulated sales orders only in the first master plan.

6. (ORIGINAL) The master scheduling system of claim 1 wherein the first and second master plans are configured to operate substantially independently of one another accept when the second master plan is updated and when the second master plan is copied to the first master plan.

7. (ORIGINAL) The master scheduling system of claim 1 wherein the second master plan is configured to provide the scheduling data and inventory ordering data without regard to the simulated sales orders.

8. (CURRENTLY AMENDED) A method of generating estimated delivery dates and of planning production, comprising:

providing first and second master plans, each including actual sales order data indicative of actual sales orders;

entering a simulated sales order in the first master plan;

receiving from the first master plan an estimated delivery date corresponding to the simulated sales order based on the actual sales order data and any other simulated sales orders currently in the first master plan; and

receiving from the second master plan production planning data based on the actual sales order data and not on any simulated sales order data.

9. (ORIGINAL) The method of claim 8 and further comprising:

intermittently updating the second master plan with new actual sales order data indicative of new actual sales orders, to obtain an updated second master plan.

10. (ORIGINAL) The method of claim 9 and further comprising:

intermittently modifying the first master plan so it contains identical data to the updated second master plan.

11. (ORIGINAL) The method of claim 8 and further comprising:

intermittently modifying the first master plan so it contains identical data to the second master plan.

12. (ORIGINAL) The method of claim 8 wherein receiving from the second master plan production planning data comprises:

receiving the production planning data based on the actual sales order data, without regard to the simulated sales order.

13. (ORIGINAL) The method of claim 8 and further comprising:

inhibiting entry of simulated sales orders in the second master plan.

14. (ORIGINAL) The method of claim 13 wherein inhibiting, comprises:

providing a first user interface for entering the simulated sales order that enters the simulated sales order only in the first master plan.

15. (ORIGINAL) The method of claim 8 and further comprising:

receiving from the second master plan inventory ordering data indicative of inventory to be ordered based on the actual sales order data.

16. (ORIGINAL) The method of claim 9 wherein entering a simulated sales order in the first master plan comprises:

entering a probability indicator indicative of how likely the simulated sales order is to be converted to an actual sales order.

17. (ORIGINAL) The method of claim 16 wherein intermittently updating the second master plan comprises:

updating the second master plan with simulated sales orders that have an associated probability indicator that exceeds a predetermined threshold.

18. (CURRENTLY AMENDED) A computer readable medium having stored thereon instructions which, when executed by a computer cause the computer to perform a method of generating estimated delivery dates and of planning production, comprising:

identifying first and second master plans, each including actual sales order data indicative of actual sales orders;

receiving a simulated sales order in the first master plan;

outputting from the first master plan an estimated delivery date corresponding to the simulated sales order based on the actual sales order data and any other simulated sales orders currently in the first master plan; and

outputting from the second master plan production planning data based on the actual sales order data and not on any simulated sales order data.

19. (ORIGINAL) The computer readable medium of claim 18 and further comprising:

intermittently updating the second master plan with new actual sales order data indicative of new actual sales orders, to obtain an updated second master plan.

20. (ORIGINAL) The computer readable medium of claim 19 and further comprising:

intermittently modifying the first master plan so it contains identical data to the updated second master plan.

21. (ORIGINAL) The computer readable medium of claim 18 and further comprising:

intermittently modifying the first master plan so it contains identical data to the second master plan.

22. (ORIGINAL) The computer readable medium of claim 18 and further comprising:

outputting from the second master plan inventory ordering data indicative of inventory to be ordered based on the actual sales order data.

23. (ORIGINAL) The computer readable of claim 19 wherein receiving a simulated sales order in the first master plan comprises:

receiving a probability indicator indicative of how likely the simulated sales order is to be converted to an actual sales order.

24. (ORIGINAL) The computer readable of claim 23 wherein intermittently updating the second master plan comprises:

updating the second master plan with simulated sales orders that have an associated probability indicator that exceeds a predetermined threshold.
